

Program Educational Objectives (PEOs) (UG)

The objectives of the computer engineering undergraduate program are

- **PEO1 – Core Competence**

Attainment of key principles and practices of computation, mathematics and basic principles of engineering to ensure that graduates are able to apply their software development skills in design and implementation of practical systems consisting of software and/or hardware components.

- **PEO2 – Problem Solving Skills and Ethics**

Analyze real-life problems and impart science-based engineering education to develop professional skills that will prepare the students for immediate employment in the industry.

- **PEO3 – Professionalism and Lifelong Learning**

Imbibe lifelong learning, professional and ethical attitude for embracing global challenges and make positive impact on environment and society.
